React Native Developer

After ending of MVP developing in PopSpot I was hired by manager with which we are familiar from one of my previous project (hyprr.com)

Rewritted and refactored all code of project, implemented new features, did design update and along with refactor of touched code pieces. Bugfixes, support of users (get information about new bugs and making fix releases). Also doing feature implementation and bug fixes on backend side. So, I can say that I am mostly in FullStack Developer role here.
All development process from getting new design to releasing to stores because I am single mobile developer at team.

Stack: React Native, TypeScript, Jotai, Zustand, Styled Components, Animated, Firebase, Branch.io, Amplitude, Appodeal, Redux, Redux Sagas, Atomic Design

React Native Developer

Temporary connected to team for enforce developing of mobile MVP application before release. (Because PayPal refused to take the team on staff due to the outbreak of special operation of our country and we had to look for a job).
After a salary delay of nearly two months decided to find new project. Also there was information that the project could be closed in the coming months. And I was glad to know that it was true already being at the next job.

All of Us Financial LLC
USA, www.allofusfinancial.com/

React Native Developer

Resume updated 9 October 2023 at 16:19

Developing financial trading mobile application.
- writing new features
- application architecture design
- refactoring
- code review

Also participated in developing on backend side. As example:
- implement pagination for GraphQL on backend side
- reduce and optimization of migrations
- changing id type for all tables from string type to uuid
- updating tests for passing pipeline

Company was bought by PayPal, but after three months of purchase and clearance process in the day when we should have started work in PayPal famous events began in Ukraine. So, that why I finished work so soon here...

React Native · GraphQL · Apollo · TypeScript · Styled Components · TypeORM · PostgresQL · Docker

Social Discovery Ventures

Further information

About me

I spent my whole childhood in Siberia. There, from the age of 5, I was introduced to computers at my father's work. He used to leave me at it with games while he did his work. Then, at the age of 8, I got my own computer. It was an old computer with five-inch floppy disks and a command line only UI, but it was enough to set me on my way to programming.

I started programming in high school. At first it was simple pages on pure html, light Action Script scripts for Flash clips (time when Macromedia Flash before it was bought by Adobe), studying Perl, trying to learn C++ by myself.

Then I went to university to study Computer Science, where I finally mastered this specialty.

On final year of university I got my first job in Intra House company, where I spent 4 years. There I started with rewriting a smart home control application from Flash to JavaScript.

There were several iterations of reworking the architecture, which resulted in a self-written framework from a combination of jQuery, a bus-based event bus from Backbone.js, AMD modules. Also wrote the backend part of the code and came up with a secure communication channel for communication between the application and the server. I participated in GITEX 2014 in Dubai.

Then, having started translating the project to React, I decided to try working remotely and moved on to the next company (and continue working only remotely from that moment).

I worked as a full-stack developer on several projects in a row. Mostly used React, there was a long period of a few years when I used Angular, but I'm happy to be back on React.

Tried NodeJS, Meteor.js, Next.js, Nest.js, React, Angular, RxJS, MaterialUI, Redux.

Then I finally got to try mobile development in a past project. It was a project at Social Discovery Ventures in which we were developing a module for video streaming and chatting which was embedded in the company's web and mobile products. That's when I finally started writing commercial code in React Native, which I'm happy to do to this day.
